What is New in AutoCAD 2020? Features added in AutoCAD 2020: The biggest change in AutoCAD 2020 is the new vector editing function. It's easy to create straight or curved paths by starting the drawing at a given point and moving the cursor to the next point. Curves may also be edited by using the "Draw" command on the Type menu. While the drawing is being edited, you can see an on-screen "converter" that shows the path being created by a tangent line. The drawing styles and line attributes are maintained automatically, so you can concentrate on editing your drawing rather than having to manually maintain the attributes for every new segment of the path. This new Vector Features edition also features the option to display drawing guides on all parts of the drawing. You can now hide and change the color of those guides, and you can turn them off in case they get in the way. In addition, AutoCAD 2020 has been updated with new guideline options that let you choose from different shapes to add to your drawing: Boxes, Circles, Rectangles, Rect

History The first version of AutoCAD was released on June 24, 1987, by Autodesk, Inc. AutoCAD is a multi-user, 2D drafting program, used primarily by architects, landscape architects, engineers, drafters, and other professionals in the fields of architecture, surveying, civil engineering, and other fields where the use of the drafting program is required. By 2011, about 12.8 million AutoCAD copies were sold. In 2013, Autodesk acquired CorelDRAW, a line-drawing product, and combined it into AutoCAD. On September 25, 2016, Autodesk announced the release of Autodesk Revit Architecture for Windows, an architectural design solution that merges AutoCAD and Autodesk Revit. On April 7, 2017, Autodesk Revit Architecture was released. Pre-historic AutoCAD In the late 1960s, Autodesk, Inc. released a development environment that allowed for the creation of macro language lisp. This tool was a starting point for the development of the Autodesk Macro Language, which was later used to create AutoLisp. At the time of its release, AutoLisp was designed to run on the Apple II family of computers. The main goal of AutoLisp was the creation of "advanced macro program language

(AMPL)" and the creation of a "macro compiler" to execute the AMPL language. AutoLisp was designed to be a graphical programming tool.
